What's All The Buzz: Planting for Bees, Butterflies And Other Bee-t-ful Friends – Laura Jull

We often plant trees and shrubs that are colorful in the landscape, but let's not forget our pollinator friends. Bees, butterflies, moths, flies, wasps, beetles and hummingbirds all contribute important ecosystem services and should be encouraged to "bee" in our yards. We will discuss what are the best native and non-native trees and shrubs to use in the landscape that attract these pollinators.

Presenter Bio –

Dr. Laura Jull received both of her A.A.S. degrees from Oakland Community College in Landscape Technology and Liberal Arts. She earned a B.S. degree in Horticulture from Michigan State University and M.S. and Ph.D. degrees in Horticultural Science from North Carolina State University. She is an Associate Professor and Extension Specialist for Woody Ornamentals in the Dept. of Plant and Agroecosystem Sciences at the UW-Madison. She teaches horticulture courses, speaks at Green Industry and gardening enthusiasts' events.
